

GRADE CALCULATOR

CFinals Project

enchanthree/BSCS 2A

Stephanie Gremio
Ma. Jasmine Jimena
Micah Secatin

PROJECT OVERVIEW

- A web-based Grade Calculator built using HTML, CSS, and JavaScript
- Allows students to compute their final grade based on three components: Quizzes, Task Performance, and Exam
- Designed to be simple and easy to use

PURPOSE

- Students often struggle to manually compute their grades
- This tool provides a quick, accurate, and organized way to calculate grades
- Reduces errors and saves time

LANGUAGES USED

- HTML — structure and layout of the page
- CSS (style.css) — design and visual styling
- JavaScript (script.js) — grade computation logic

FEATURES

- Input fields for: Student Name, Course Name
- Score inputs for: Quizzes, Task Performance, Exam
- A "Calculate Grades" button that processes the inputs
- A results section that displays the computed grade

HOW IT WORKS (FLOW)

1. User enters their name and course
2. User inputs scores for Quizzes, Task Performance, and Exam
3. Clicks "Calculate Grades"
4. JavaScript computes the weighted/total grade
5. Result is displayed on the same page

PROJECT STRUCTURE

- index.html — the main page with the form
- style.css — handles the look and feel
- script.js — handles the grade calculation logic
